ENVIRONMENTAL EARTH & OCEAN SCIENCE, B.S. - ENVIRONMENTAL OCEAN SCIENCES OPTION

The Bachelor of Science in Environmental Earth and Ocean Sciences (BS EEOS) is a 4-year course of study focusing on the physical mechanisms, interactions, and human activities that characterize and impact the Earth system. BS EEOS students will gain an understanding of the environmental issues with an emphasis on climate change. In addition to a common core curriculum students choose one of three concentrations, including Environmental Ocean Sciences for those attracted to environmental issues related to marine systems. The concentrations provides a great deal of flexibility so that students may pursue a minor that augments their degree.
